Price List February 2026 B

CTM Potters Supplies

IF YOU USE CLAY YOU NEED CTM

Manufacturer of Contem Underglazes

Direct Delivery of Pallets of Clay -
Valentine, Earthstone & Potclays Clays

Stockists of:
- Valentine Clays, Earthstone Clays
- Terracolor and Contem Glazes, Underglazes, Stains
- Rohde Kilns - please ask for details
- Frema, Rohde & Shimpo Potters Wheels
- Raw Materials, Oxides, Frits, Plasters
- Tools, Kiln Furniture, Books, etc, etc, etc

Mail Order and Collect - You are welcome to visit.

CTM POTTERS SUPPLIES
OF EXETER & DONCASTER

General Information

All Prices are subject to change without notice, require delivery to be added, where appropriate, and VAT to be added (excluding books)

Minimum Order: £5.00 + Delivery + VAT Cash, Card or Bank Transfer.
Card Charges: Any type of Business / Commercial Debit or Credit Cards 2%;
Any type of non-UK cards 2% of net price. We don't take AMEX.
Terms and Conditions of Sale: Our terms and conditions of sale apply in all cases—no exceptions
Returns: Special order items cannot be returned; returns of stock items must be within 30 days of purchase, unopened and in re-saleable condition.
Opening Hours: **Monday—Friday** 9.30 am-4.30 pm.
Closed Bank Holidays and the week between Xmas and the New Year
Also open 9.00 am to 2.00 pm—usually on the 1st **Saturday** of each month
Telephone: **Doncaster** 01709 770 801 **Exeter** 01395 233 077
Potters Group Discount: **5% off CTM List Price of all items, apart from direct pallet deliveries of clay, Kilns and Wheels - ask for our current discounted prices.**

DELIVERY CHARGES - require VAT to be added

Prices are subject to change without notice.

Local: EX, TQ from Exeter Branch and DN1-18, DN20-30 from Doncaster Branch

CALCIUM BORATE FRIT 1030-1180oC SiO2 17.9%, B2O3 50.3%, MgO 0.1%, Al2O3 4.9%, K2O 0.3%, CaO 26.5% NOT AVAILABLE

FERRO FRIT 3110 SiO2 69.8% Al2O3 3.7% B2O3 2.64% K2O 2.3% Na2O 15.3% CaO 6.3% Soft low alumina sodium borosilicate frit for glazes. Used in crystal and crackle glazes. Helps copper blues and manganese purples and raku glazes.

FERRO FRIT 3124 SiO2 54.9%, Al2O3 10.0%, B2O3 13.7%, K2O 0.7%, Na2O 6.4%, CaO 14.3% low melting well balanced borate frit

FERRO FRIT 3134 SiO2 45.5%, Al2O3 2.0%, B2O3 22.8%, Na2O 10.1%, CaO 19.5%, low alumina high calcium borate frit.

FERRO FRIT 3195 SiO2 48.3%, Al2O3 12.0%, B2O3 22.6%, Na2O 5.7%, CaO 11.4% low melting well balanced high borate frit

HIGH ALKALINE FRIT 860-1060oC SiO2 50.3%,, B2O3 3.9%, Al2O3 5.7%, Na2O3 17.5%, K2O 17.3%, CaO 5.3% A high alkaline (Soda and Potash) version of a borax frit. High expansion rate making them suitable for crackle glazes. Helps create turquoise copper blues and purple/brown manganese in glazes.

LEAD BI-SILICATE FRIT 900 - 1100oC 6.6 Expansion.SiO2 34%, Al2O3 <2%, PbO 64%. Good clear, general purpose lead frit for developing rich, bright surfaces and good reaction to colours. The safe way to introduce lead. Particularly suitable for red clays.

LEAD SESQUISILICATE FRIT 860 - 1080oC 8.1 Expansion. SiO2 28-29%, Al2O3 <2%, PbO 68-71%, As above but specially coated to reduce solubility.

STANDARD BORAX FRIT 900 - 1140oC. 7.8 Expansion K2O 1.33%, Na2O 8.75%, CaO 15.2%, Al2O3 7.5%, SiO2 48.3%, B2O3 18.7% Often used in the production of earthenware glazes when a lead-free glaze is required. A slight milkiness, especially at low temperatures, may be evident over red clays, and the colour response with oxides etc is not as vivid as with lead frits.

Potters Plaster—general purpose plaster of pairs. **Potters Plaster HP2**—Harder than potters plaster, for batts and moulds.

Typical ratio of plaster to water to make a mould:

Cast Moulds for use with China Clay	1.25 kg plaster / 1 litre water
Cast Moulds for use with other clays	1.35 kg plaster / 1 litre water
Handpressed Moulds	1.4 kg plaster / 1 litre water

Code	Miscellaneous Liquids	500 ml	1 Litre	5 Litre

GUMA	Gum Arabic	£6.50	£11.43	£21.25	£90.40

Sodium Silicate : used in preparation of casting slips as deflocculant. 75TW is usually for Bone China and Porcelain. One drop at a time.
Sodium Dispex : alternative to Sodium silicate
SS : Dilute in 3 parts water and apply with a brush—used to ease mould separation.

Bentone EW : make into a 4% solution first.
SCMC Cellulose Glaze Binder : make into a 2% solution first.
Then use either of the above two as a suspension agent—test but probably a) as approx 10% (EW) or 15% (SCMC) of the liquid in a dipping glaze; b) as approx 55% (EW) or 80% (SCMC) of the liquid in a brush on glazes. OR BUY OUR UGM LIQUID WHICH CONTAINS BOTH.

Calcium Chloride : Used as a flocculent particularly in E/ware glazes —dissolve in hot water and then add to slop one drop at a time.
FS200 : Between 1% & 2% in UG's and in larger quantities in glazes to make them more brushable.
GUMA : Used in water as a medium for UG's or stains and in glazes as a binder.

V59	Red Terracotta with Grog 1080-1160oC	£16.30	£32.30	£59.90	£87.65

V60 The White/Buff Stoneware is based on the E/S 10 with fillers to help shorten casting times
V61 The porcelain is based on the Special Porcelain making a superb casting slip or base for decorating slips.
V63 White Earthenware is ideal for small to medium items and for making decorating slips, just add stains through 100s mesh sieve.
V59 The Red Terracotta has medium sized grogg added to the milled Etruria Marl and is suitable for large items like garden pots or urns.

Valentine LoStone Clay 1060– 1220oC

For stoneware and earthenware firing—becoming fully vitrified from a gentle fired 1150oC / faster fired 1160oC.
Packed in 10 kg bags—usually available in stock at Doncaster and Exeter

VC128	LoStone—Ember - 1060-1220oC Salmon to Warm Red	4	12.0%	y	£354.05	£582.38	£916.50

DELIVERED—Includes cost of a "named day" delivery to most of the UK by tail-lift

This is a very cost effective way for purchasing clay but you must be aware that the driver will not usually carry the clay or help to move the pallet more than a few feet and then only if on a totally flat surface.

A = Texture 1=smooth, 10=coarser
B = % Contraction at 1100oC for Earthenware & at 1200oC for Stoneware

Direct Delivery includes the cost of delivery to the main areas of the UK but needs VAT to be added

MIXED PALLETS : if you take a mixed pallet from **ONE** Clay producer (minimum 250kg per clay) i.e. 2 x 250kg or 500kg + 250kg etc please deduct **£20 + VAT** from the price of each clay. Valentine and Earthstone are classed as one producer for delivery purposes.

POST CODES : See page 2

If not in Areas Local, 1, 2 and 3 you will need to add a surcharge :-

Area 4 add £10 + VAT, for Area 5 add £15 + VAT,

Area 6A add £35, Area 6 B/C add £40,

Area 7+ Please Ask For Special Quote

VALENTINE / EARTHSTONE—TAIL LIFT DELIVERY—2026

Includes cost of a "named day" delivery to most of the UK by tail-lift

See page 13 for regional price variations. For mixed pallets from Valentine/Earthstone deduct a discount of **£20** off each clay price, This is a very cost effective way for purchasing clay but you must be aware that the driver will not usually carry the clay
or help to move the pallet more than a few feet and then only if on a totally flat surface.

A = Texture 1=smooth, 10=coarser
B = % Contraction at 1100oC for Earthenware & at 1200oC for Stoneware
C = Y means the clay is a stock item for call in customers / small lots mail order customers (see P6-7)
Stoneware Matures from 1180oC and generally vitrifies from 1220oC—higher iron ones a little lower

We do not normally stock Potclays clay at our two branches.

We only supply in 250kg + pallet lots

We stock about 65 of the excellent Valentine and Earth-stone Clays but we do not stock Spencroft or Potclays clays in our stores.

VAT to be added to all orders. Additional charges apply to those outside Areas Local, 1 and 2.

POST CODES : See page 2 — If not in Areas Local, 1,2 and 3 you will need to add a surcharge:
See next page for surcharges and other information

Geographic Additional Charges, Multiple Clay Discounts and Delivery Information

Direct Delivery includes the cost of delivery to the main areas of the UK but needs VAT to be added

MIXED PALLETS : if you take a mixed pallet from **ONE** Clay producer (minimum 250kg per clay) i.e. 2 x 250kg or 500kg + 250kg etc please deduct **£20 + VAT** from the price of each clay. Valentine and Earthstone are classed as one producer for delivery purposes.

POST CODES : See page 2
If not in Areas Local, 1, 2 and 3 you will need to add a surcharge :-

Area 4 add £10 + VAT, for Area 5 add £15 + VAT,

Area 6A add £35, Area 6 B/C add £40,

Area 7+ Please Ask For Special Quote

- All deliveries of palletised clays and slips can be arranged on a tail-lift vehicle – however the pallet will only be lowered off the vehicle.
- Any other help by the driver is not guaranteed.
- Problems with deliveries to houses are kerbs, slopes etc and so in those situations the pallet can only be dropped on to the road and any further action is the customers responsibility.

- **Deliveries with restricted access requiring a small vehicle can only have pallets up to 750kg—please ask for 750kg prices and the cost of a Luton Tail Lift Vehicle which will usually incur an EXTRA £40 + VAT**

This is a very cost effective way for purchasing clay but you must be aware that the driver will not usually carry the clay or help to move the pallet more than a few feet and then only if on a totally flat surface.

All prices need VAT to be added (excl books) & delivery charges where appropriate

SIEVES, PLASTICS, MAGNETS, SCALES, MIXING TOOLS, WHIRLERS, SAFETYWEAR etc

If you have a problem keeping any powder glazes in suspension, when stored for some time, we recommend the use of a medium next time. We can supply the ingredients or you can use some Universal Glaze Medium - Dipping 75-85% water to 15-25% medium.

Code	Glaze Medium	250 g pot	500 g pot	1 kg pot	5 kg can	10 kg
UGM	Universal Glaze Medium	£3.70	£5.25	£8.90	£35.95	£57.50

5 kg of UGM is 4.95 litres appx

For a detailed description of mixing glazes for dipping and brush-on please see Page 25

METALLIC, RAKU / CRACKLE GLAZES & PORCELAIN GLAZES

EARTHENWARE METALLIC GLAZES

Brush On Code	Spectrum Metallic Brush On Cone 05 1040-1050oC	473 ml Pot		Brush On Glaze	Spectrum Metallic Brush On Cone 05 1040-1050oC	473 ml Pot
SPM 151B	No Longer Stocked			SPM 154B	No Longer Stocked	
SPM 152B				SPM 155B		
SPM 153B				SPM 156B		

These are in US Pint pots

Code	Earthenware Metallic Glaze Powder 1020-1080oC	500 gm pack	1 kg	2 kg	5 kg
LSM10	Metallic Antique Silver	£6.29	£10.48	£19.84	£47.25
LSM22	Metallic Gold	£6.29	£10.48	£19.84	£47.25

Fired at Cone 05, these Metallic Glazes are non-toxic but are not classed as food safe - so are for decorative work only. The thicker the coats - the more mirror like the finish - but the lower the colour definition. The colour can change depending upon the type of light - natural, fluorescent, incandescent.

CONTEM RAKU, E/WARE CRACKLE GLAZE POWDER

Code	Contem Earthenware / Raku Crackle Glaze Powder 850-1050oC	500 gm pack	1 kg	2 kg	5 kg	10 kg	25 kg
RAK1	Transparent Raku Crackle	£7.45	£13.56	£24.46	£57.60	£108.40	£256.00
RAK2	White Raku Crackle	£8.45	£15.55	£28.50	£56.60	£128.50	£303.00
RAK3	Turquoise Raku Crackle reduced copper effect under reduction	£8.45	£15.55	£28.50	£56.60	£128.50	£303.00
RAK4	Yellow Raku Crackle	£8.45	£15.55	£28.50	£56.60	£128.50	£303.00
RAK5	Green Raku Crackle	£8.45	£15.55	£28.50	£56.60	£128.50	£303.00
RAK6	Red Raku Crackle	£8.45	£15.55	£28.50	£56.60	£128.50	£303.00
RAK7	Blue Raku Crackle	£11.70	£22.10	£41.62	£101.10	£195.50	£462.00

In an electric kiln the Contem Raku Glazes give a beautiful crackle glaze, but only a smokey effect with Raku

Some potters when not rakuing soak the finished work in tea or ink to colour the cracks and create effects. We do recommend adding up to 2% bentonite in any earthenware dipping glazes to prevent settling out if keeping the liquid for some time. Although we haven't tried rakuing with all the glaze stains you could probably be able to add then to the transparent raku glaze. Or even the white stoneware crackle glazes to make a pastel colour . **Put on crackle glazes thick to give enough depth of glaze to crack. Some people open the kiln early to encourage the cracks—can take at least 48 hours to crack after taking out of the kiln. Some people put them in the freezer - not our recommendation!**

STONEWARE WHITE CRACKLE GLAZES

Code	Crackle White Powder	Temp. Range	500 gm	1 kg	2 kg	5 kg	10 kg	25 kg

We recommend sieving the powder before mixing to break it up, adding back any speckles; we recommend using a powered hand mixer (drill with paddle mixer or hand held blender for smaller lots) then sieve to ensure no agglomerated dry powder and then rest it for two hours to allow any air to be absorbed and not create bubbles, pin holes when fired. Mix to double cream or slightly thinner to match the porosity of the bisque. **To help keep in suspension add 2% bentonite to the dry powder first.**

The CONTEM SW range of stoneware glazes has 56 glazes for you to choose—see page 26 and 27

Code	One Coat Lustres 740-850oC	5 gm	10 gm	25 gm
LU1	Mother of Pearl	£2.35	£3.50	£6.15
LU2	Amber	£2.90	£4.20	£8.30
LU4	Copper / Bronze	£37.00	£72.00	£165.00
LU5	Platinum	£37.00	£72.00	£165.00
LU6	Bright Gold 10%			
LU7	Thinners	—–-	£3.00	£5.25

Apply the Lustres in one coat to glazed surface.
Gold can take two coats.
LU4,5 & 6 can be applied direct for a matt finish.
Do not shake the bottle or decant more than you need for the next 20 minutes. Keep brushes separate and dust free, clean with thinners.
Dip the brush into the liquid, work on a flat part of the glazed ceramic piece until saturated - then pass the brush lightly over the surface to remove
excess liquid metal.

Code	On Glaze Powders 780-840oC	25 gm	100 gm	250 gm
K1	White On Glaze	£2.30	£6.85	£14.25
K6	Red On Glaze	£2.05	£6.00	£12.50
K10	Black On Glaze	£1.85	£5.50	£11.50

ON GLAZES - EXETER ONLY - WHILE STOCKS LAST
Used to decorate already glazed and fired surfaces, then fired with the On Glazes at a lower temperature. Carrying media used for On Glazes are usually oils and varnishes. They do have poor resistance to abrasion and chemical attack and so are unsuitable for functional ware. They are opaque and are detectably raised from the surface of the initial glaze.

STAFFORDSHIRE STONEWARE GLAZES 1200-1260oC
In Powder and Large Brush On Pots

- Our extremely popular Staffordshire Stoneware Glazes.
- Possibly the most cost-effective stoneware glaze powders available.
- Very easy to mix and prepare (though for dipping glazes we definitely recommend adding 2% bentonite to all powder and soaking for an hour before adding the final water and mixing).
- They can give good contrasting results when given three brush on coats as against two coats (or two dips compared with one dip) - see the pictures on the website.
- Only available in the two larger brush on pot sizes as they are so cheap.
- Seriously worth trying a selection of these glazes.

Glaze Mixing
We recommend sieving the powder before mixing to break it up, adding back any speckles; we recommend using a powered hand mixer (drill with paddle mixer or hand held blender for smaller lots) then sieve to ensure no agglomerated dry powder and then rest it for two hours to allow any air to be absorbed and not create bubbles, pin holes when fired.

Dipping : Mix to S/ware to double cream or slightly thinner to match the porosity of the bisque. Mix E/ware to single cream. Typical dipping recipe is E/Ware 750/790gm liquid to 1000gm powder; S/Ware 690/700gm liquid to 1000gm powder. Recommended liquid is 85% water 15% medium or 2% SCMC solution. If you have problems keeping in suspension add 2% bentonite to the dry powder first.

Brush On :Typical brush on recipe is 100gm powder to 40gm water and 50gm of medium or 90gm of 2% SCMC solution. For some dense glazes you may have to put in as much as 105gm of liquid.

If you have already mixed a large quantity of a glaze and it is falling out of suspension then you can use calcium chloride flakes as a flocculent, particularly in E/ware glazes, Dissolve one flake in a small amount of hot water and then add to slop one drop at a time

CONTEM STONEWARE GLAZES 1200-1260oC
In Powder and Brush On Pots

Page One of our CONTEM range of stain based Stoneware Glazes - 56 matt and glossy, bright and pastel colours —in powder and in brush-on. Wide firing range and very reliable stain based glazes. See website for description of each colour.

SW56P	S/Ware Deep Damson Glaze	£8.00	£14.80	£36.35	£71.50	£169.70	SW56B	£5.91	£10.12

See website for photos of actual fired tiles

See page 25 for details on dipping and brush on glazes—we do recommend adding up to 2% Bentonite to glaze powders before mixing a dipping glaze to help keep it suspended—it is cheap so you might as well. If making a brush on we recommend using Universal General Medium instead of just water to help make it more brushable—see page 24 for suggested mix ratios.

For CONTEM Earthenware Glossy range see pages 28 and 29
(which also can be made in mid temp range)

AMACO CELADON 1180-1241oC
Brush On Pots

Amaco Celadon glazes are glossy and transparent. They are mixable for you to experiment and find the perfect custom colour. All colours are food safe. Recommended 3 coats.

VAT to be added on to all prices

MAYCO STONEWARE 1196-1305oC
Brush On Pots

The Mayco stoneware range offers depth and reliability to artists working from mid-range to high fire temperatures. Many glazes will break over textures revealing secondary colours and shades. The choice of clay body, thickness of glaze application, firing process and temperature will affect the fired finish.

VAT to be added on to all prices

SW405B	Light Magma	Sand coloured high texture glaze that creates a rough, crated surface. The thicker the application the more textured the surface will be	£14.35
SW406B	Dark Magma	Charcoal coloured high texture glaze that creates a rough, crated surface. The thicker the application the more textured the surface will be	£14.35

Flux is a flowing glaze developed for use with other stoneware glazes to enhance the movement and to promote reactions and interesting effects. Apply 2-3 coats of Flux under or over another mid-range glaze to bring about 'hidden colours'. Can be brushed in layers, glaze trailed and blotted with a sponge. The thicker the application the more mobility there will be.

VAT to be added on to all prices

MAYCO STROKE & COAT
999-1230oC

Mayco Stroke & Coat is a versatile product that can be applied on wet clay, earthenware and stoneware bisque. Used to create intricate, detailed designs. The colours can butt up to one another without moving. They are intermixable, allowing you to create custom shades. Can be thinned with water to create a wash or watercolour style. Fires glossy without a clear glaze and is opaque with 2-3 coats. Ideal product for a studio, classroom, potter or fine artist.

BOTZ STONEWARE ENGOBES—EDITION 1180-1280oC
Brush On Pots

Botz Stoneware Engobes—Edition Range— applied in 2-3 coats to produce strong colours, especially if with a glossy glaze on top. Engobes are similar to decorating slips but contain glaze and fluxes to give better adhesion, aid vitrification and act as a primer for the top glaze making them better for domestic ware.
Can be applied to greenware and bisque, and mixed with other ones in the range—such as white to make pastel versions.

BEW 9537	E/Ware Mistral	Glossy, white with grey cloudy splotches, to 1060oC	£8.40 pot	£22.90 pot

Pot Code	BOTZ Earthenware Mostly 1020-1100oC	Description	200 ml Pot Code—2	800 ml Pot Code-8
BEW 9541	E/Ware Glossy Gold	Glossy, 1040oC maximum 5 minute soak, surprisingly shiny bronze gold, can run and crackle	£8.40 pot	£22.90 pot
BEW 9542	E/Ware Blue Effect	Glossy, suitable for Raku, mottled blue, 10 1060oC	£8.40 pot	£22.90 pot
BEW 9545	E/Ware Gloria	Satin-Glossy, can fire to 1100oC, surprisingly shiny	£8.40 pot	£22.90 pot
BEW 9590	E/Ware Mauritius	Stain-Glossy blue, maximum firing temp of 1040oC.	£8.40 pot	£22.90 pot
BEW 9592	E/Ware Summer Aster	Glossy, can be fired to 1100oC, buttercup yellow with	£8.40 pot	£22.90 pot
BEW 9593	E/Ware Winter Magic	Glossy, can be fired to 1100oC, grey with yellow, green and blue splotches	£8.40 pot	£22.90 pot
BEW 9594	E/Ware Sunrise	Glossy, white with pinky red cloudy splotches, 1060oC	£8.40 pot	£22.90 pot
BEW 9595	E/Ware Forest Meadow	Glossy, can be fired to 1100oC, mid green with yellow, red, blue, white splotches	£8.40 pot	£22.90 pot
BEW 9596	E/Ware Blazing Yellow	Glossy, suitable for Raku, strong yellow with orange tones where thin, purposefully textured, to 1060oC	£8.40 pot	£22.90 pot
BEW 9597	E/Ware Snake Green	Glossy, suitable for Raku, mottled mid green, 1060oC	£8.40 pot	£22.90 pot
BEW 9605	E/Ware Speckled Red	Glossy, rich red with black splotches, pink where thin, to 1060oC	£8.4 0 pot	£22.90 pot
BEW 9606	E/Ware Lava	Glossy, suitable for Raku, bright orange with wonderful	£9.95 pot	£27.10 pot
BEW 9607	E/Ware Coral Red	Glossy, suitable for Raku, bright red with wonderful	£9.95 pot	£27.10 pot
BEW 9608	E/Ware Harlequin	Glossy, pink, yellow and blue splotches	£9.95 pot	£27.10 pot
BEW 9612	E/Ware Red Matt	Matt red, can be fired up to 1100oC	£9.95 pot	£27.10 pot

Stir thoroughly. Apply on clean, dust free bisque ware (wash away all salts). Apply with a brush—allow to dry. Apply second and third coat after each layer dries. Allow to dry for 24 hours before firing.

Ideally 1250oC for stoneware / porcelain, 1050oC for earthenware (apart form the 1040oC max glazes)
Soak 10-20minutes for earthenware , 30 minutes stoneware
If fast fired restrict cooling rate of first 200oC to prevent orange peel / pinholes to smooth out.

We recommend that schools, colleges etc check your order with us, particularly delivery charges before getting the order signed off to save any complications.

BOTZ EARTHENWARE ENGOBES—EDITION 900-1100oC
Brush On Pots

Botz Earthernware Engobes—Edition Range— Botz Engobes can be used in the same way as decorating slips or underglaze colours. They can be applied to leather-hard or fully dry clay and are suitable for covering the entire surface or creating decorative designs. Apply them with a brush or a slip trailer for detailed work. When applied more thickly, they create a raised relief effect on the clay surface.

If left unglazed, engobes fire to a smooth matt finish. For brighter, more vibrant colour results, apply a clear transparent glaze over the top. Suitable firing temperature ranges from 900°C to 1100°C.

For best results, apply 2–3 coats with a brush onto unfired clay (leather-hard or dry) or onto bisque-fired ware.

They are ideal for marbling techniques — simply drip slightly diluted engobes onto one another on dampened bisque or leather-hard clay. They are also excellent for sgraffito decoration.

For a silky matt finish with subtle speckled effects, mix 30% engobe with 70% Earthenware glaze (BEW 9106) and apply three coats.

Engobes can also be used as a casting slip for small objects and fired to 1050°C.

Firing range: 900°C – 1100°C.

EG57P	E/Ware Matt White Glaze 1020-1080oC #########	£8.35	£15.50	£38.10	£75.00	£178.50	EG57B	£5.99	£10.27
EG58P	E/Ware Matt Black Glaze 1020-1080oC #######	£9.30	£17.40	£42.90	£84.60	£202.50	EG58B	£6.19	£10.69

See page 25 for details on dipping and brush on glazes—we do recommend adding up to 2% Bentonite to glaze powders before mixing a dipping glaze to help keep it suspended—it is cheap so you might as well. If making a brush on we recommend using Universal General Medium instead of just water to help make it more brushable—see page 24 for suggested mix ratios.

With sufficient notice we can make these as Mid Temp MG 1120-1160oC
Please see pages 26 and 27 for stoneware SW 1200-1260oC

We recommend that schools, colleges etc check your order with us, particularly delivery charges before getting the order signed off to save any complications.

If using UG's on Greenware (not recommended with any make) you may need to add more liquid to the UG first or the clay will probably suck the moisture out of the UG and leave behind a powder which will not stick or fire correctly when refired with the top glaze—resulting in peeling and pinholes. In greenware make sure it is fully dry as any moisture turning to steam has to find a way out.

To make a Underglaze from stains the recipe depends upon the strength of the stain.

Typical stain strength - 52% stain, 22% glaze powder, 22% quartz 600, 4% FS200 flux (GS31, GS2, GS53, GS8, GS59, GS5, GS44, GS45, GS11, GS24, GS25, GS14 would all need this approx. ratio—also others depending upon how strong a colour you are trying to achieve).

Strong Stain — 25% stain, 22% glaze powder, 48% quartz 600, 5% FS200 flux.

Sieve the powders then mix with water or preferably UG Medium and then mix well with a cylindrical kitchen hand blender 3-5 minutes and then sieve again.

Make a small amount first and then test it is strong enough.

To make a pastel version you would add 3-10% zirconium silicate, sieved and mixed very very well. A white underglaze would typically be 73% zirconium silicate, 22% glaze powder, 5% FS200 flux

These are typical recipes—we do not guarantee the colour or how successful the application would be.

We recommend that schools, colleges etc check your order with us, particularly delivery charges before getting the order signed off to save any complications. VAT (except books) and Delivery to be added to all orders.

Stains are made by melting oxides, milling to a fine powder so that they are in a safe non-toxic form to use—subject to safe handling practices. For a **White Stain** for use in a glaze use 6-9% Zirc 5 or Tin Oxide from Page 5. Be aware that Tin whites can go pink if a chrome green glaze is being fired in the kiln . 1/3% Lithium Carbonate can help stains melt in more evenly as they are dense.

Code	Decorating Slips 1000-1300oC	500 ml	1 litre	5 litre
DS1001	Intense Orange Slip	£18.05	£25.75	£74.60

GS Stains

Stains are used to colour glazes, the surface of clay, or in large percentages the body of clay and slips. We can tell you which % and combination of stains we use to make the UG and PU colours (along with Zirc 5 where appropriate).

STAINS — UNDERGLAZES

If trying to make a Powder Underglaze a typical recipe is :-

52% stain, 22% glaze, 22% quartz 600, 4% FS200 Flux.
Or for strong stains typically 25% stain, 22% glaze, 49% quartz 600, 4% FS200 Flux.
Mix with UGM and water at an equal weight to make a liquid .

This is a rough guide only, you must test them yourselves.

Typical decorating slip recipe is 300gm HP71 Ball Clay, 100gm Golleg China Clay, 50gm Potash Feldspar, 550gm water.

Orton Cones

See below for the sizes we usually have in stock.

We do sometimes have other grades in our miscellaneous box.

Standard Large Cones Prices

OR 1-12 and 01-018
Box of 50 £13.40 box
Bag of 10 £5.70 pack
e.g. for a box of 05 grade cones :OR05/50 or for a pack of 10 05 grade cones : OR05/10

Cone Stands / Plaques for Three Standard Large Cones

£2.40 + VAT

Small Cones Prices

OSC 1-12, 01-018
Box of 50 £9.90 box
Bag of 10 £3.60 pack

Mini Bars Prices

OMB 01-10, 01-08, 014-017
Box of 50 £9.90 box
Bag of 10 £3.60 pack

The Orton Cones bend at different temperatures depending upon the heating rate per hour in the last hour of firing.
For example: 05 cone bends at
1030oC at 60oC/hr
1038oC at 100oC/hr
1046oC at 150oC/hr
1062oC at 300oC/hr
But will also bend if soaked at 1000oC for an hour.

It takes 15-25 minutes for a cone to bend fully slowly at first but quickly once bent past halfway.

1/2 hour of soaking may bend a cone of a higher grade / temperature.

VAT to be added to all prices apart from books, and delivery where appropriate

SHELVES AND BATTS 21" AND OVER ARE COLLECT OR PALLET DELIVERY ONLY !

If you need another size please give us loads of notice (at least 12 weeks) and we will try to get it for you.

Though please ask as we may have just the size you are looking for in our odds and ends piles or can cut one to fit if square or rectangular

BEAD FIRING, REFRACTORY STANDS, KILN REPAIR

Bead Firing Stands up to 1050 oC

KS60	Small 100 x 80 x 60 mm	£14.40
KS61	Medium 150 x 100 x 60 mm	£16.90
KS62	Large 150 x 130 x 80 mm	£19.30

Bead Stands and Metal Rods. For hanging items—high biscuit first, then low glaze fire on rods — designed for beads so heavier items can make rods bend. If fire high—be quick, do not soak

Refractory Stands

KS80	33 x 33 x 15 mm	1 x 4 mm hole	£4.18
